

J. H. DALLMEYER

OPTICIAN,

(Son-in-law and Pupil of the late A. Ross),

Respectfully begs to inform the Photographic Public, that his New

TRIPLE ACHROMATIC LENS

IS the only existing View Lens free from Distortion. (The ordinary single combination reproduces straight lines barrel-shaped the "Orthographic" pincushion-shaped).

The New Lens, besides being free from Distortion, also includes a very large angle with flat field, and the most perfect definition. It is quicker acting than the "Orthographic" "Single" combinations, and superior for copying and enlarging. Amateurs who are not already possessed of Portrait Lenses will also find it sufficient for that purpose.

Pictures taken with the New Lens may be seen at No. 19, BLOOMSBURY STREET, OXFORD STREET.

See J. H. D.'s Paper, read before the Meeting of the London Photographic Society, June 5th, 1860.

PORTRAIT LENSES of improved construction, possessing greater intensity over the whole extent of plate, a flatter field, and the most perfect definition, both at the centre and margin of the picture. Also extra "quick-acting" ones producing pictures in *one half* the usual time.

A NEW STEREOSCOPIC LENS

Of short focus, including a Large Angle Instantaneous Views, Stereoscopic Portraits, &c. free from Distortion.

J. H. D. succeeding the late A. R. in the manufacture of the

ASTRONOMICAL TELESCOPE,

Has Removed the whole of the Machinery, &c. (bequeathed to him), to No. 19, BLOOMSBURY STREET, OXFORD STREET, W.C., where he continues to produce Instruments of the same high character as those supplied during A. R.'s lifetime, all of which, for years past, have been exclusively made by him, and in which department alone Theory and Practice has been successfully united.

TERRESTRIAL TELESCOPES, Naval, Military, &c., much improved. Also,

MICROSCOPES AND MICROSCOPIC OBJECT GLASSES,

The latter possessing many important advantages, the result of protracted Analytic Dioptric Calculations; the late A. R. having also left to him one-half of the Implements used for their production.

Catalogues on application at

No. 19, BLOOMSBURY STREET,
NEW OXFORD STREET, LONDON, W.C.
